# TRIDONIC

**Emergency lighting units** EM powerLED

# EM powerLED BASIC 1 – 2 W

Combined emergency lighting LED Driver 1 - 4 W

## Product description

- Emergency lighting LED Driver for manual testing
- SELV for output voltage < 60 V DC
- Low profile casing (21 x 30 mm cross-section)
- 5-year guarantee

## Properties

- Mains and emergency operation
- Constant current mode
- With either screw or clip fastening (clip-fix)
- 1, 2 or 3 h rated duration
- Selectable operating time (jumper)
- Green charge status display LED
- Output power limitation
- Automatic restart after LED replacement
- Electronic multi-level charge system
- Pulse current charging to optimize battery life
- SELV (outputs powerLED, battery, status LED, test switch)
- Polarity reversal protection for battery
- Deep discharge protection
- Very low energy consumption from the battery after activation of the deep discharge protection
- Short-circuit-proof battery connection
- Emergency lighting LEDs available

# Batteries

- High-temperature cells: 2 Ah
- NiMH batteries
- Cs cells
- 4-year design life
- 1-year guarantee
- For battery compatibility refer to table "Battery selection"

# EM powerLED BASIC 1 – 2 W

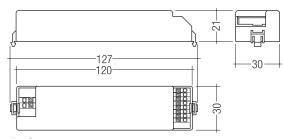

Combined emergency lighting LED Driver 1 – 4 W

#### Technical data

Rated supply voltage	220 – 240 V
Mains frequency	50 / 60 Hz
Forward voltage range LED module (1 x LED)	2.8 – 3.4 V
Forward voltage range LED module (2 x LED)	5.6 – 6.8 V
Max. open circuit voltage	10 V
Time to light	0.31 s from detection of emergen- cy event
Overvoltage protection	320 V (for 1 h)
Battery discharge current	See page 4
Max. casing temperature tc	70 °C
Ambient temperature ta	-25 +50 ℃
Mains voltage changeover threshold	according to EN 60598-2-22
Type of protection	IP20

Screw-fix

- EN 60068-2-29
- EN 60068-2-30

#### **Duration link selection**

#### Jumper selection

Module supplied with jumper in 3 hours position (position B).

The position of the link will only be read on first power up. If it is changed afterwards both the battery and mains supply must be disconnected for 10 seconds to enable the EM powerLED to read the new link position on reconnection of the battery and mains. It will lead to a false battery failure indication if the link is changed after installation without this reset.

#### Life-time

Average life-time 50,000 hours under rated conditions with a failure rate of less than 10%. Average failure rate of 0.2% per 1000 operating hours.

# Technical data Accu-NiMH

2.0 Ah	
Battery voltage/cell	1.2 V
Cell type	Cs
Case temperature range	
to ensure 4 years design life	+5 °C to +55 °C
Max. short term temperature (reduced life-time)	70 °C
Max. number discharge cycles	4 cycles per year plus
	30 cycles during
	comissioning

Max. storage time

#### **Batteries**

Connection method: 4.8 x 0.5 mm spade tag welded to end of cell

For stick packs this connection is accessible after the battery caps have been fitted

6 months

To inhibit inverter operation disconnect the batteries by removing the connector from the battery spade tag.

For further information refer to corresponding battery datasheet.

#### Storage, installation and commissioning

Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.

#### Further technical data

The EM powerLED has a unique power regulation circuit; this is designed to limit the total power drawn from the battery in the event of using LED's with a forward voltage (Vf) higher than 3.4 V.

In such cases the unit will reduce the LED current in order to maintain an acceptable drain current from the battery and hence meet the required duration time. This feature enables the EM powerLED to have minimum battery count for a given range of LED's.

At a low charge state of the battery (<1.5 V at the 1W driver and <3 V at the 2 W driver) the LED will not be driven in maintained mode via the switched line until the rated battery voltage levels are exceeded.

#### Mechanical details

Case manufactured from polycarbonate.

Glow-wire test according to EN 61347-1 with increased temperature of 850  $^\circ\mathrm{C}$  passed.

LED status indicator

- Green
- Mounting hole 6.5 mm dia
- Lead length 1000 mm

Test switch

- Mounting hole 7.0 mm dia
- Lead length 550 mm

Battery leads

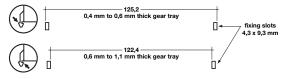

- Quantity: 1 red and 1 black
- Length: 1m
- Wire type: 0.5 mm<sup>2</sup> solid conductor
- Insulation rating: 90 °C

Battery end termination Push on 4.8 mm receptacle to suit battery spade fitted with insulating cover

Module end termination 8.0 mm stripped insulation

Two-piece batteries are supplied with a 200 mm lead with 4.8 mm receptacles at each end and insulating covers to connect the separate sticks together.

## Recommended fixing details for clip fixing

Max. torque at the clamping screw: 0.5 Nm / M4

#### Isolation and electric strength testing of luminaires

Electronic LED Drivers can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with 500 Vpc for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The isolation resistance must be at least  $2 M \Omega$ .

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1,500 Vac (or 1,414  $\times$  1,500 Vbc). To avoid damage to the electronic LED Drivers this test must not be conducted.

#### Wiring type and cross section

Wiring mains (SL, N, L) LED (LED +, LED –)

batteries (Bat +, Bat –) test switch (switch) status indication LED (status K, A)

Use one wire for each terminal connector only.

#### Max. lead insulation diameter

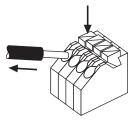

Battery	2.1 mm
Test switch	2.1 mm
Indicator LED	2.1 mm

#### Maximum lead length

LED	3 m
status indication LED	1m
batteries	1 m

### Release of the wiring

Press down the "push button" and remove the cable from front.

#### Wiring diagram

#### Wiring diagram for one LED or two LED in series

Take care that the LED is connected with the right polarity. LED that are connected to the EM powerLED devices should have a reverse polarity protection device such as a schottky diodes fitted, otherwise irreversible damage could occur if the LED is connected in reverse polarity. Any protection device must be capaple of handling in excess of 700 mA.

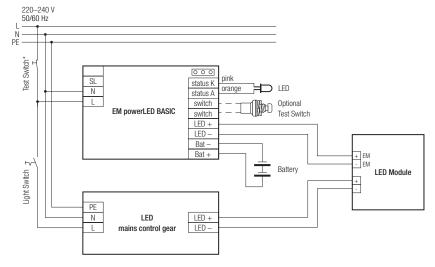

Note: Please ensure that at the terminal of the EM powerLED module the battery negative is not connected to the negative of the LED load.

#### Manually tested emergency lighting with combined LED modules for general and emergency lighting (e.g. STARK QLE CLASSIC EM, STARK LLE 24-280-1250 EM, STARK CLE CLASSIC EM, STARK SLE CLASSIC EM):

Due to the fact that independent circuits are used for general and emergency lighting it is important that the normal supply of the mains LED Driver is switched off together with the permanent emergency supply prior to checking the operation of the emergency LEDs.

If this is not done then it may not be possible to see that the emergency LEDs are operating.

Use a circuit similar to that shown next.

\* Use 230 V Test switch

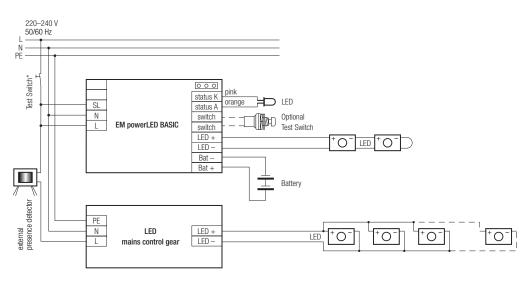

#### Simple CORRIDOR FUNCTION with EM powerLED 1-2 W

With the mains operation function of the EM powerLED 1–2 W a simple corridor function can be realised.

An external presence detector switches the mains LED Driver. The EM powerLED 1–2 W has the switched line SL connected to permanent mains supply.

On presence both mains LED Driver and EM powerLED 1–2 W are active and driving all LEDs. With no presence the mains LED Driver is switched off by the presence detector and the EM powerLED 1–2 W stays on operating the emergency LEDs at low power.

Use a circuit similar to that shown next.

#### Wiring instructions

- The powerLED terminals, battery, indicator LED and test switch terminals are classified as SELV. Keep the wiring of the input terminals separated from the wiring of the SELV terminals or consider special wiring (double insulation, 6 mm creepage and clearance) when these connections should be kept SELV.
- The output to the LED is DC but has high frequency content at 125 kHz, which should be considered for good EMC compliance.
- powerLED leads should be separated from the mains connections and wiring for good EMC performance.
- Maximum lead length on the powerLED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- Maximum lead length for the Test switch and Indicator LED connection is 1m. The test switch and Indicator LED wiring should be separated from the powerLED leads to prevent noise coupling.
- Battery leads are specified with 0.5  $\,mm^2\,cross\,section$  and a length of < 1.3 m
- Switched live and unswitched live supplies must be off the same phase.
