

Driver LC 81W 1200-1750mA flexC Ip ADV

advanced series

**Product description**

- _ LED Constant current LED driver for luminaire installation
- _ New version DC operating with EL marking
- _ For luminaires of protection class I and protection class II
- _ Temperature protection as per EN 61347-2-13 C5e
- _ Output current adjustable between 1,200 – 1,750 mA
- _ Max. output power 80.5 W
- _ Up to 87 % efficiency
- _ Nominal lifetime up to 100,000 h
- _ 5 years guarantee (conditions at <https://www.tridonic.com/manufacture-guarantee-conditions>)

Housing properties

- _ Low profile metal casing with white cover
- _ Type of protection IP20

Interfaces

- _ Terminal blocks: 45° push terminals

Functions

- _ Overload protection
- _ Short-circuit protection
- _ No-load protection
- _ Overtemperature protection
- _ Burst protection voltage 1 kV
- _ Surge protection voltage 1 kV (L to N)
- _ Surge protection voltage 2 kV (L/N to earth)
- _ Suitable for emergency escape lighting systems acc. to IEC 50172

Typical applications

- _ For linear/area lighting in office applications

Driver LC 81W 1200-1750mA flexC Ip ADV

advanced series

**Ordering data**

Type	Article number	Packaging, carton	Packaging, pallet	Weight per pc.
LC 81W 1200-1750mA flexC Ip ADV	28002475	50 pc(s).	650 pc(s).	0.242 kg

Technical data

Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
DC voltage range	176 – 280 V
Max. input current (at 230 V, 50 Hz, full load)	0.46 A
Typ. input current (at 230 V, 0 Hz, full load)	0.395 A
Leakage current (at 230 V, 50 Hz, full load)	< 400 µA
Mains frequency	0 / 50 / 60 Hz
Overvoltage protection	320 V AC, 1 h
Max. input power ^①	95 W
Typ. power consumption (at 230 V, 50 Hz, full load) ^①	91.5 W
Min. output power	24 W
Max. output power	80.5 W
Typ. efficiency (at 230 V, 50 Hz, full load) ^①	87 %
λ (at 230 V, 50 Hz, full load) ^①	0.95
Output current tolerance ^{②③}	± 7.5 %
Max. output current peak ^④	≤ output current + 20 %
Max. output voltage (U-OUT)	60 V
THD (at 230 V, 50 Hz, full load)	< 8 %
Typ. current ripple (at 230 V, 50 Hz, full load)	± 5 %
Output P _{ST_LM} (at full load)	≤ 1
Output SVM (at full load)	≤ 0.4
Starting time (at 230 V, 50 Hz, full load)	< 500 ms
Starting time (DC mode)	< 500 ms
Switchover time (AC/DC) ^⑤	< 500 ms
Turn off time (at 230 V, 50 Hz, full load)	≤ 0.5 s
Hold on time at power failure (output)	0 s
Ambient temperature t _a (at lifetime 100,000 h)	40 °C
Storage temperature t _s	-40 ... +80 °C
Lifetime	up to 100,000 h
Guarantee (conditions at www.tridonic.com)	5 Year(s)
Dimensions L x W x H	360 x 30 x 21 mm
Hole spacing D	348 mm

Approval marks

IP20 SELV       RoHS

Standards

EN 55015, EN 61000-3-2, EN 61000-3-3, EN 61347-1, EN 61347-2-13, EN 61547, EN 62384, according to EN 50172, according to EN 60598-2-22

Specific technical data

Type	Output current ^①	Min. output voltage	Max. output voltage	Max. output power	Typ. power consumption (at 230 V, 50 Hz, full load)	Typ. current consumption (at 230 V, 50 Hz, full load)	t _c point max.	Ambient temperature t _a	I _{out} select	Resistor ^⑥
LC 81W 1200-1750mA flexC Ip ADV	1,200 mA	20 V	54 V	64.8 W	74.0 W	330 mA	80 °C	-20 ... +50 °C	0-1	ADV Type A
LC 81W 1200-1750mA flexC Ip ADV	1,300 mA	20 V	54 V	70.2 W	80.0 W	360 mA	85 °C	-20 ... +50 °C	0-1	ADV Type D

LC 81W 1200-1750mA flexC Ip ADV	1,550 mA	20 V	51 V	79.1 W	90.0 W	400 mA	90 °C	-20 ... +50 °C	0-2	ADV Type D
LC 81W 1200-1750mA flexC Ip ADV	1,750 mA	20 V	46 V	80.5 W	91.5 W	410 mA	90 °C	-20 ... +50 °C	0-2	ADV Type A

① Test result at 1,750 mA.

② Output current is mean value.

③ Test result at default output current.

④ Test result at 25 °C.

⑤ Valid for immediate change of power supply type otherwise the starting time is valid.

⑥ Type A is a short circuit plug (0 Ω).

ADV Plug for output current select

Accessory

Product description

- _ Ready-for-use resistor to set output current value
- _ Compatible with LED driver serie LC flexC ADV; not compatible with I-SELECT (generation 1) and I-SELECT 2 (generation 2)
- _ Resistor is base insulated
- _ When using your own resistors, make sure the resistor must be isolated
- _ Resistor power 0.25 W
- _ Current tolerance $\pm 2\%$ additional to output current tolerance
- _ Hot plug of the resistor is not permitted
- _ For detailed current setting see table "Specific technical data" of the respective LED driver and chapter 3.7 or 3.8 Current setting in data sheet

Ordering data

Type	Article number	Colour of X area	Colour of Y area	Marking	Resistor value	Packaging, bag	Weight per pc.
ADV Plug Type A YL	28001771	Yellow	Yellow	A	0.00 k Ω	10 pc(s).	0.001 kg
ADV Plug Type D YL	28001774	Yellow	White	D	54.90 k Ω	10 pc(s).	0.001 kg

1. Standards

EN 55015
EN 61000-3-2
EN 61000-3-3
EN 61347-1
EN 61347-2-13
EN 61547
EN 62384

According to EN 50172 for use in central battery systems

According to EN 60598-2-22 suitable for emergency lighting installations

2. Thermal details and lifetime

2.1 Expected lifetime

Expected lifetime

Type	ta	40 °C	50 °C	55 °C
LC 81W 1200-1750mA flexC Ip ADV	tc	80 °C	90 °C	x
	Lifetime	100,000 h	50,000 h	x

The LED Driver is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

3. Installation / wiring

3.1 Circuit diagram

3.2 Wiring type and cross section

The wiring can be stranded wires with ferrules or rigid wires with a cross section of 0.5 – 1.5 mm².

Strip 8.5 – 9.5 mm of insulation from the cables to ensure perfect operation of the push-wire terminals.

3.3 Release of the wiring

Press down the “push button” and remove the cable from front.

3.4 Installation instructions

The LED module and all contact points within the wiring must be sufficiently insulated against 3 kV surge voltage.

Air and creepage distance must be maintained.

3.5 Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- Mains leads should be kept apart from LED Driver and other leads (ideally 5 – 10 cm distance)
- Max. length of output wires is 2 m.
- Incorrect wiring can damage LED modules.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).
- The current selection has to be installed in the accordance to the requirement of low voltage installation.

3.6 Replace LED module

1. Mains off
2. Remove LED module
3. Wait for 20 seconds
4. Connect LED module again

Hot plug-in or output switching of LEDs is not permitted and may cause a very high current to the LEDs.

3.7 Earth connection

The earth connection is conducted as protection earth (PE). The LED Driver can be earthed via metal housing. If the LED Driver will be earthed, protection earth (PE) has to be used. There is no earth connection required for the functionality of the LED Driver. Earth connection is recommended to improve following behaviour.

- Electromagnetic interferences (EMI)
- Transmission of mains transients to the LED output

In general it is recommended to earth the LED Driver if the LED module is mounted on earthed luminaire parts respectively heat sinks and thereby representing a high capacity against earth.

For Class I application, protection earth need to connected with the metal housing (bottom part).

For Class II application, protection earth is no need to be connected, below 2 scenarios should be considered:

- If the LED Driver housing is screw on a metal part inside the luminaires, both LED Driver and LED module must be insulated.
- If the LED Driver housing is screw on a plastic part inside the luminaires, the LED module need to be insulated.

3.8 Current setting

1,200 mA: Terminal 0 and 1 connected with 0 Ω wire (max. 6 cm length) or resistor ADV Plug Type A BR (article number: 28001771)

1,300 mA: Terminal 0 and 1 connected with resistor ADV Plug Type D BR (article number: 28001774)

1,400 mA: All terminals open

1,550 mA: Terminal 0 and 2 connected with resistor ADV Plug Type D BR (article number: 28001774)

1,750 mA: Terminal 0 and 2 connected with 0 Ω wire (max. 6 cm length) or resistor ADV Plug Type A BR (article number: 28001771)

3.9 Mounting of device

Max. torque for fixing: 0.5 Nm/M4

4. Electrical values

Test at 230 V 50 Hz.

4.1 Efficiency vs load

4.2 Power factor vs load

4.3 Input power vs load

4.4 Input current vs load

4.5 THD vs load

THD without harmonic < 5 mA (0.6 %) of the input current:

4.6 Maximum loading of automatic circuit breakers in relation to inrush current

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush current	
Installation Ø	1.5 mm ²	1.5 mm ²	1.5 mm ²	2.5 mm ²	1.5 mm ²	1.5 mm ²	1.5 mm ²	2.5 mm ²	I _{max}	Time
LC 81W 1200-1750mA flexC Ip ADV	10	15	18	23	6	9	11	14	50 A	200 µs

4.7 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %

	THD	3.	5.	7.	9.	11.
LC 81W 1200-1750mA flexC Ip ADV	< 8	< 10	< 5	< 3	< 3	< 3

Acc. to 6100-3-2. Harmonics < 5 mA or < 0.6 % (whatever is greater) of the input current are not considered for calculation of THD.

5. Functions

5.1 Short-circuit behaviour

In case of a short circuit on the output side (LED) the LED Driver switches off. After elimination of the short-circuit fault the LED Driver will recover automatically.

5.2 No-load operation

The LED Driver works in latch mode to prevent output which allows the application to be able to work safely when LED string opens due to a failure.

5.3 Overload protection

If the maximum load is exceeded by a defined internal limit, the LED Driver will protect itself and LED will shut down. After elimination of the overload, the nominal operation is restart by resetting the mains.

5.4 Over temperature protection

The LED Driver will work in latch mode, the nominal operation is restart by resetting the mains.

5.5 DC emergency operation

The LED Driver is designed to operate on DC voltage and pulsed DC voltage. For a reliable operation, make sure that also in DC emergency operation the LED Driver is run within the specified conditions.

Light output level in DC operation (EOF_p): 100 % (cannot be adjusted)

The voltage-dependent input current of Driver incl. LED module is depending on the used load.

The nominal voltage-dependent no-load current of Driver (without or defect LED module) is for:

AC: < 61 mA

DC: < 2 mA

6. Miscellaneous

6.1 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V_{DC} for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V_{AC} (or 1.414 x 1500 V_{DC}). To avoid damage to the electronic devices this test must not be conducted.

6.2 Conditions of use and storage

Humidity:	5 % up to max. 85 %, not condensed (max. 56 days/year at 85 %)
-----------	--

Storage temperature:	-40 °C up to max. +80 °C
----------------------	--------------------------

The devices have to be within the specified temperature range (ta) before they can be operated.

The LED Driver is declared as inbuilt LED controlgear, meaning it is intended to be used within a luminaire enclosure.

If the product is used outside a luminaire, the installation must provide suitable protection for people and environment (e.g. in illuminated ceilings).

6.3 Maximum number of switching cycles

All LED Driver are tested with 50,000 switching cycles.

6.4 Additional information

Additional technical information at www.tridonic.com → Technical Data

Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
