TRIDONIC

Module SLE G7 9mm 800 / 2,600lm ADV

Modules SLE advanced

LES09

Product description

- _ For spotlights and downlights
- _ For operating with SELV Driver suitable
- _ Excellent thermal management by COB technology
- _ Uniform radiation with Dam&Fill technology
- _ Integrated LED module
- _ Cooling required
- _ Flexible operating mode
- _ 4,000 K module COI approved acc. to AS/NZS1680.2.5:1997
- _ Long lifetime: 55,000 hours
- _ 5 years guarantee (conditions at

https://www.tridonic.com/manufacturer-guarantee-conditions)

Optical properties

- $_$ Colour temperatures 2,700, 3,100, 3,500 and 4,100 K
- _ Useful luminous flux 3,245 lm at Irated and tp = $25 \, ^{\circ} \text{C}$
- $_$ Efficacy of the LED module 126 lm/W at Irated and tp = 25 °C
- _ High colour rendering index CRI > 90
- _ Small colour tolerance (MacAdam 3)

Mechanical properties

- _ Module dimension LES09
- _ Fixing holes for M3 screws

System solution

_ Combine Tridonic's LED modules and dimmable drivers to achieve an outstanding system efficacy (configuration possible via https://setbuilder.tridonic.com/)

2. Thermical details

2.1 tp point, ambient temperature and lifetime

The temperature at tp reference point is crucial for the light output and lifetime of a LED product.

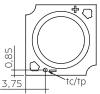

For SLE G7 a tp temperature of $85\,^{\circ}\text{C}$ has to be complied in order to achieve an optimum between heat sink requirements, light output and lifetime.

Compliance with the maximum permissible reference temperature at the tp point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

To check the tc / tp temperature, the temperature sensor has to be mounted on the PCB at the marked position as stated in the drawing.

2.2 Storage and humidity

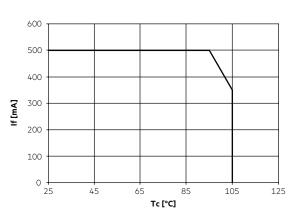

storage temperature	-30 +80 °C

Operation only in non condensing environment.

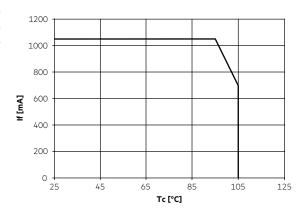

Humidity during processing of the module should be between 0 to 85 %.

2.3 Derating curves

SLE G7 09mm 800lm 9xx ADV

SLE G7 09mm 2600lm 9xx ADV

2.4 Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the SLE G7 will be greatly reduced or the SLE G7 may be destroyed.

2.5 Heat sink values

SLE G7 09mm 800lm 9xx ADV

ta	tp	Operating current	R th, hs-a
25 ℃	65°C	250 mA	4,80 K/W
35 °C	65°C	250 mA	3,60 K/W
45 °C	65°C	250 mA	2,40 K/W
25°C	65°C	350 mA	3,10 K/W
35 °C	65°C	350 mA	2,30 K/W
45°C	65°C	350 mA	1,50 K/W
25°C	65°C	450 mA	2,30 K/W
35 °C	65°C	450 mA	1,70 K/W
45°C	65°C	450 mA	1,10 K/W

SLE G7 09mm 2600lm 9xx ADV

ta	tp	Operating current	R th, hs-a
25 °C	85 °C	500 mA	2,20 K/W
35°C	85 ℃	500 mA	1,70 K/W
45 °C	85℃	500 mA	1,10 K/W
25 °C	85°C	700 mA	1,50 K/W
35°C	85°C	700 mA	1,10 K/W
45 °C	85℃	700 mA	0,80 K/W
25 °C	85℃	900 mA	1,10 K/W
35°C	85℃	900 mA	0,90 K/W
45 °C	85℃	900 mA	0,60 K/W

Notes

The actual cooling can differ because of the material, the structural shape, outside influences and the installation situation. A thermal connection between SLE G7 and heat sink with heat-conducting paste or heat conducting adhesive film is absolutely necessary.

Additionally the SLE G7 has to be fixed on the heat sink with M3 screws to optimise the thermal connection.

Use of thermal interface material with thermal conductivity of $\lambda > 1$ W/mK and layer thickness of interface material with max. 50 μm or a similar interface material where the quotient of layer thickness and thermal conductivity $b < 50 \ \mu mmK/W.$

3. Installation / wiring

3.1 Electrical supply/choice of LED driver

SLE G7 from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED driver which complies with the relevant standards. The use of LED drivers from Tridonic in combination with SLE G7 guarantees the necessary protection for safe and reliable operation.

If a LED driver other than Tridonic is used, it must provide the following protection:

- Short-circuit protection
- · Overload protection
- Overtemperature protection

SLE G7 must be supplied by a constant current LED driver. Operation with a constant voltage LED driver will lead to an irreversible damage of the module.

Wrong polarity can damage the SLE G7.

SLE G7 must not be operated with nonSELV LED driver.

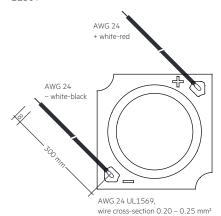

SLE G7 are basic insulated up to 60 V SELV against ground and can be mounted directly on earthed metal parts of the luminaire. If the max. output voltage of the LED driver (also against earth) is above 60 V SELV, an additional insulation between LED module and heat sink is required (for example by insulated thermal pads) or by a suitable luminaire construction.

At voltages > 60 V an additional protection against direct touch (test finger) to the light emitting side of the module has to be guaranteed. This is typically achieved by means of a non removable light distributor over the module.

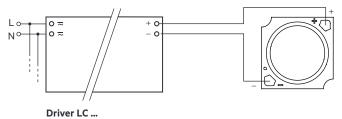

3.2 Wiring

Wiring without housing

LES09

Wiring example

3.4 Mounting instruction

SLE G7 from Tridonic which have to be installed on a heat sink have to be connected with heat-conducting paste or heat conducting adhesive film and fixed with M3 screws.

The fixing/cooling surface must be cleaned by removing all dirt, dust and grease before installing the LED modules.

None of the components of the SLE G7 (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

Max. torque for fixing: 0.3 Nm (LES9)

The LED modules are mounted with 2 screws per module. In order not to damage the modules only rounded head screws and an additional plastic flat washer (notice working temperature) or rounded head screw with collar (ISO 7380-2) with head diameter \ge 6.9 mm must be used for LED modules without housing.

For further information please refer to to the brochure entitled "Technical Design-In-Guide SLE GEN7".

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate.

Avoid corrosive atmosphere during usage and storage.

3.5 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice.

For further information for EOS/ESD safety guidlines and the ESD classification please refer to the brochure entitled http://www.tridonic.com/esd-protection.

4. Lifetime

4.1 Lifetime, lumen maintenance and failure rate

The light output of an LED module decreases over the lifetime, this is characterized with the L value. L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the lifetime of an LED module.

As the L value is a statistical value and the lumen maintenance may vary over the delivered LED modules. The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value.

In addition the percentage of failed modules (fatal failure) is characterized by the C value.

The F value is the combination of the B and C value. That means for F degradation and complete failures are considered, e.g. L70F10 means 10 % of the LED modules may fail or be below 70 % of the initial luminous flux.

4.2 Lumen maintenance

Lifetime declarations are informative and represent no warranty claim. Preliminary calculated lifetime data until LM80 test reports are available

5. Electrical values

5.1 Declaration of electrical parameters

Irated ... Nominal operating current the module is designed for.

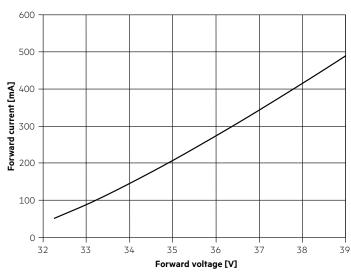

Imax ... Max. permissible continuous operating current incl. The tolerances of the LED driver.

Max. permissible LF current ripple ... Max. output current of the LED driver incl. Tolerances and LF current ripple must not exceed this value.

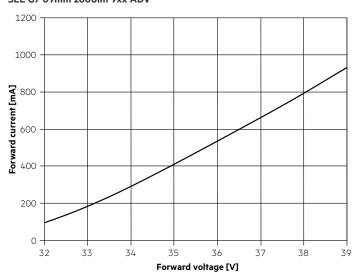

Max. permissible peak current ... The max. output peak current of the LED driver must not exceed this value.

5.2 Typ. forward voltage vs. forward current

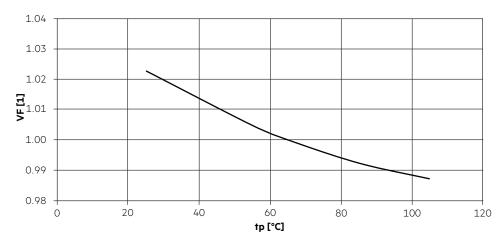

SLE G7 09mm 2600lm 9xx ADV

5.3 Forward voltage vs. tp temperature

The diagrams based on statistic values.

The real values can be different.

6. Photometric characteristics

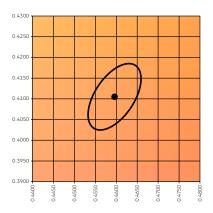

6.1 Coordinates and tolerances according to CIE 1931 and colour rendering

The specified colour coordinates are measured integral after a settling time of 100 ms. The current impuls depends on the module type. The ambient temperature of the measurement is $ta = 25 \, ^{\circ}\text{C}$. The measurement tolerance of the colour coordinates are \pm 0.005.

Module type	Current impulse
SLE G7 09mm 800lm 9xx ADV	350 mA
SLE G7 09mm 2600lm 9xx ADV	700 mA
